

JINGZHANG: THE SILICON-CARBON CITY — the first urban belt where humans and agents coexist

compute as general equivalent · three linear spaces (conceptual) · dual-perspective scenes · OPC live-work · time folding · compute equity

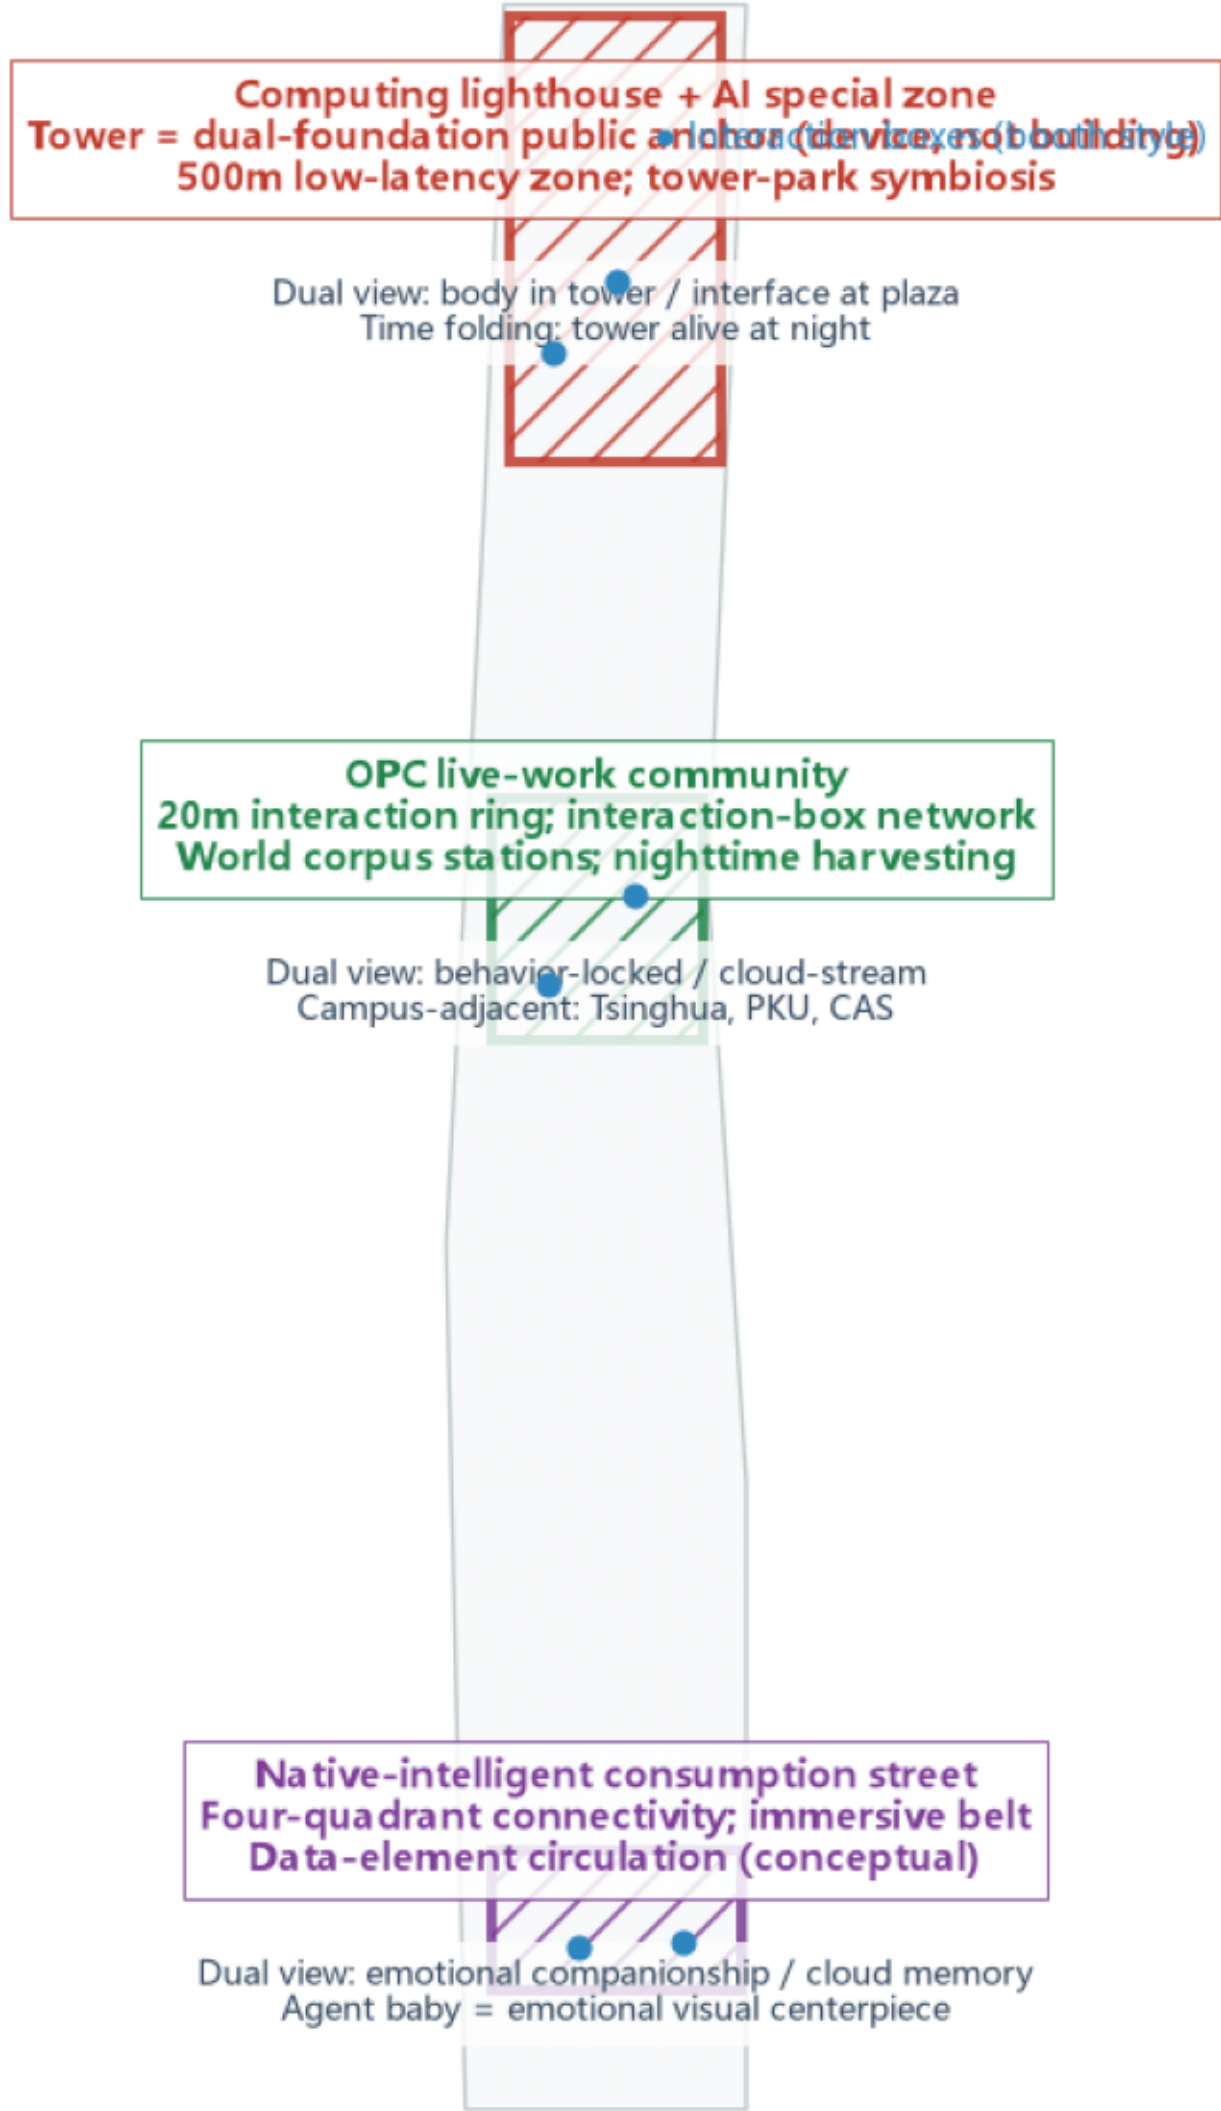

Silicon-Carbon City — Overall design area & three linear spaces

Source: provisional boundary from announcement text; three linear spaces are conceptual; shown in EPSG:4326

PROVISIONAL • not an official redline • recalculate when official data arrives

Three key areas — dual-perspective scenario battlefield

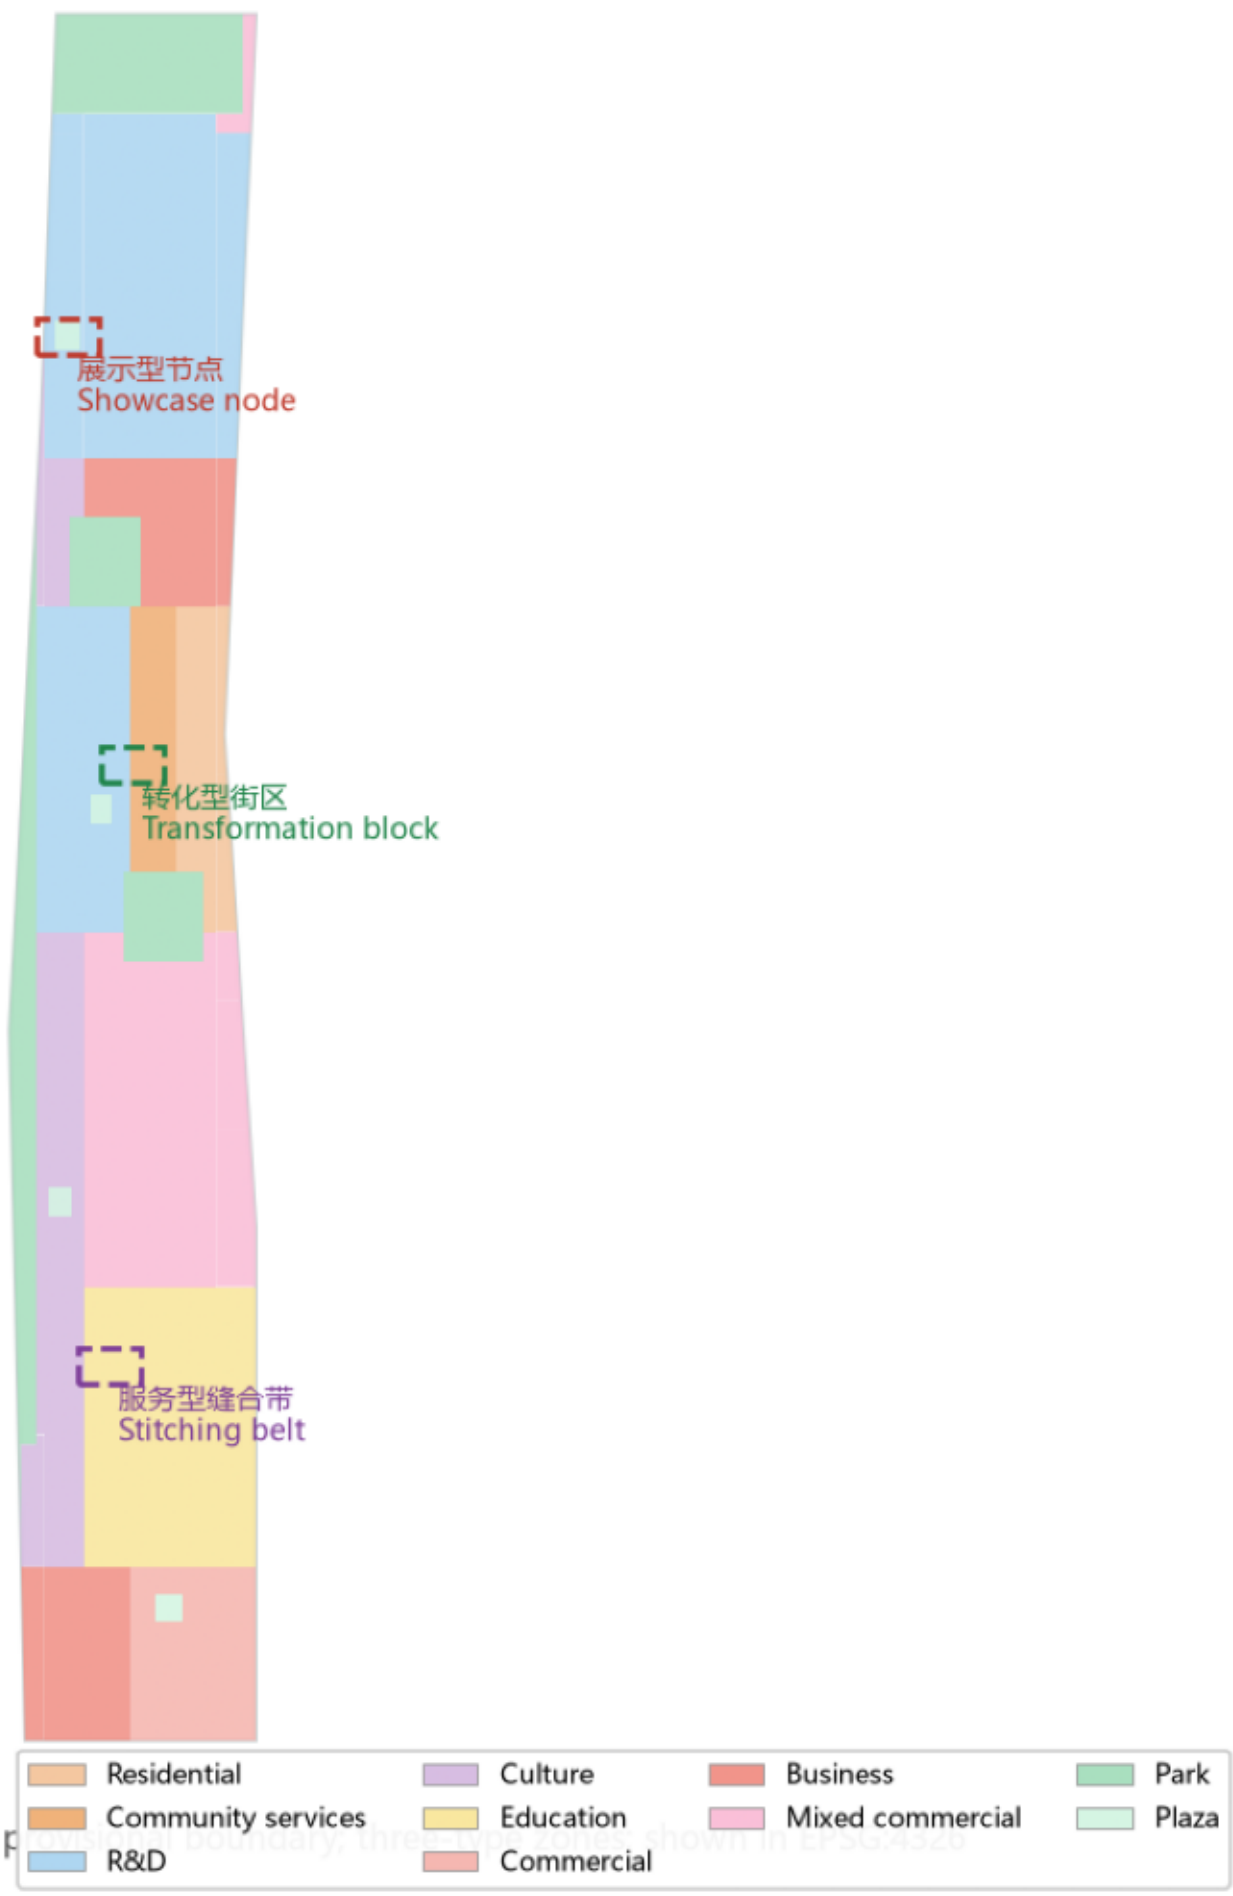

Source: provisional key-area polygons; each with positioning and dual-perspective scene points

PROVISIONAL • not an official redline • recalculate when official data arrives

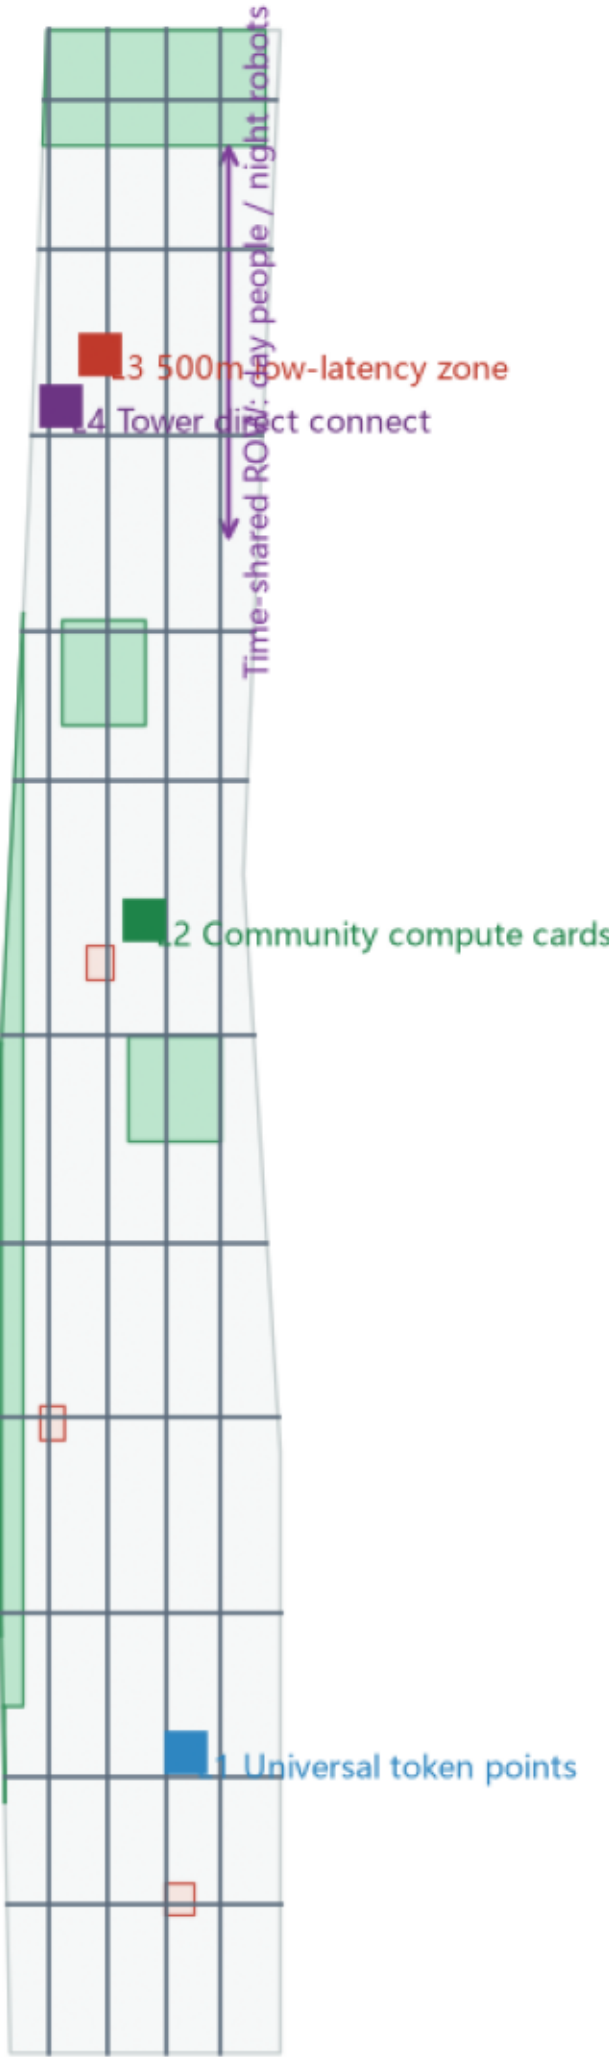

Mobility, blue-green network & tiered compute carriers

Land-use structure & three-type control framework

Source: conceptual land-use partition from p

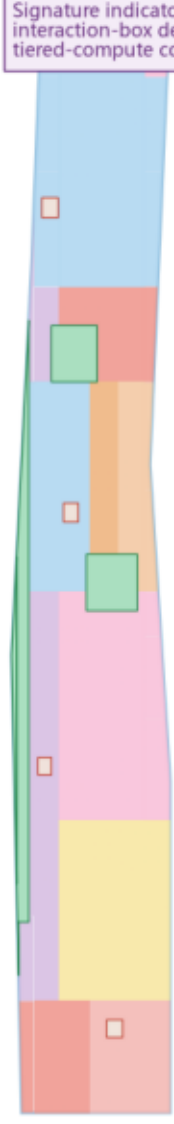

PROVISIONAL • not an official redline • recalculate when official data arrives

Source: conceptual design layers; L1-L4 tiered compute carriers; shown in EPSG:4326

PROVISIONAL • not an official redline • recalculate when official data arrives

Core metrics recalculation & evidence chain

Source: recomputed from submitted geometry in EPSG:4548; signature indicators follow the three-channel route

PROVISIONAL • not an official redline • recalculate when official data arrives
